

Session 09 — Homework

No new TaskFlow code this session

There is no required TaskFlow coding homework for Session 09.

Today's official Session End already reaches a complete, working state: real fetched tasks and people, independent loading/error/Retry for each, and every Session 07/08 feature (filtering, search, person selection, stats, Add/Toggle/Delete/Edit) still working correctly on top of it. After inspecting the authoritative final target, everything genuinely still missing from this point belongs to a later session — Session 10 owns the architecture refactor, and Session 11 owns the remaining interaction behavior (delete confirmation, combined edit, keyboard shortcuts, `AddTaskForm` mount-gating). There is no meaningful, genuinely-missing piece of CODE that belongs to Session 09 alone without reaching into one of those.

What to do instead

1. **Practice Lab 09** is this session's hands-on reinforcement — complete it if it hasn't been assigned as in-class work already.
2. **Self-study (optional, not submitted):** re-read `session-end-documentation/session-09-project-guide.pdf` and answer its review questions for yourself. The guide includes its own answers, so this is a check on your own understanding, not something to hand in.

For next session

Session 10 will start from today's official Session End exactly as it stands — there is no homework-solution code being promoted into it this time.
